

RELEASE SYSTEM

Master Content Strategy

A practical 90-day release and automation system for launching an expensive music video, reviving TikTok/Instagram, and turning one song into a repeatable content machine.

PAPI LOTUS

Dark R&B / afterhours pop / synthetic celebrity rollout

EXECUTIVE PLAN

The Papi Lotus rollout in one sentence

Do not drop the video like a one-time upload. Turn the video and the song into a dark, repeatable visual world that feeds TikTok, Instagram Reels, Stories, YouTube Shorts, Spotify traffic, and a website for 90 days.

Core strategy: build one era, not random posts. The era should feel like nocturnal romance, cinematic isolation, luxury sadness, and digitally manufactured mystery. The visuals can be AI-assisted, but the emotional tone has to be consistent.

The goal is not to become a daily influencer. The goal is to create a minimal-editing system where one finished song and one expensive music video become dozens of short clips, image posts, lyric loops, website moments, and scheduled social content.

Primary objective: revive Papi Lotus with a clean identity, relaunch the Instagram grid, return to TikTok using low-friction short clips, and create a lightweight website/fan funnel.

Operating rule: every asset should look like it came from the same movie.

The rollout should be built around three engines:

- The release engine: DistroKid upload, pre-save/landing page, official video premiere, Spotify/Apple/TikTok/IG audio usage.
- The content engine: AI-reskinned clips, lyric overlays, visualizers, fake paparazzi/backstage/editorial assets, and repeatable short-form templates.
- The automation engine: Claude for creative direction and prompts, Codex for file organization and website automation, Postiz for scheduling and cross-posting.

POSITIONING

Artist identity and lane

Papi Lotus should be positioned as a dark R&B; / afterhours pop artist with a cinematic, mysterious, AI-enhanced visual presence. The reference point is not imitation of another artist. It is the emotional lane: night drives, distorted romance, empty luxury, and beautiful decay.

Public-facing description: Papi Lotus makes afterhours music for people who miss someone they should not text.

Persona: emotionally controlled, seductive, distant, cinematic, self-aware, a little toxic, but not cartoonishly dark.

Promise to the audience: every post gives them a feeling - not a random update.

Brand world: rainy night, motel neon, black leather, chrome, wine-red lighting, analog grain, luxury loneliness, blurry memories.

Content should feel like: a leaked camera roll from an artist who disappeared for a while and came back with a darker, sharper world.

Avoid: generic influencer poses, random selfies, comedy posts that break the spell, overexplaining the music, and posting too many unrelated aesthetics at once.

90-DAY ROLLOUT

Release timeline built around one finished video

This timeline assumes the song and video already exist, and the release still needs packaging, short-form assets, AI visual expansion, and scheduling.

Phase	Timing	Goal	Deliverables
Phase 0: Asset audit	Days 1-3	Find the strongest hooks and visuals.	Pick 3 song snippets, 10 video moments, 5 lyrics, 1 main cover direction, 1 release date target.
Phase 1: Rebirth	Days 4-14	Signal that Papi Lotus is active again without overexplaining.	Archive mismatched posts if needed, update bio, generate 30 AI portraits, schedule cryptic visuals and Stories.
Phase 2: Worldbuilding	Days 15-30	Make the era feel bigger than the song.	AI editorial photos, false paparazzi posts, lyric loops, 10-15 vertical clips, website landing page.
Phase 3: Teaser pressure	Days 31-45	Repeat the strongest song moment until it sticks.	Daily or near-daily short clips, countdown, behind-the-video posts, audio snippet usage.
Phase 4: Release week	Days 46-52	Drive views, saves, shares, comments, and platform clicks.	Official video drop, Reels/Shorts/TikToks, stories, link-in-bio, pinned posts, email/SMS if available.
Phase 5: Aftershock	Days 53-90	Milk the video and keep the song alive.	Alternate cuts, slow/sped edits, visualizers, lyric posts, reaction-style prompts, second-wave AI backgrounds.

Best release target: choose a date at least 3-4 weeks after the DistroKid upload so there is time to create Spotify/Apple links, build content, and avoid rushed metadata corrections. DistroKid lists different general delivery windows by platform, with Facebook/Instagram often taking longer than Spotify or TikTok, so do not cut the timeline too close.

RELEASE CHECKLIST

DistroKid and music video launch checklist

Use this as the non-negotiable release preparation list before the official video goes live.

Area	Checklist
Audio	Final master WAV ready; clean and explicit versions if needed; correct artist name; exact song title; ISRC/UPC captured; lyrics finalized.
Artwork	3000x3000 single cover; no blurry text; consistent dark Papi Lotus palette; cover works as a tiny thumbnail.
DistroKid	Upload at least 3-4 weeks early when possible; confirm stores; enable TikTok/IG if available; verify artist profiles; claim Spotify for Artists and Apple Music for Artists.
Music video	Full horizontal version; vertical 9:16 crops; 15-second teaser; 30-second teaser; 6-second bumper; thumbnail; YouTube title/description/tags.
Links	Create landing page with smart links, video link, Spotify/Apple links, Instagram/TikTok, and email capture.
Pinned social	Pin the official Reel/TikTok, teaser, and identity post. Your profile should show the era immediately.
Postiz	Schedule 30-45 days of content before release week starts. Avoid relying on motivation on release week.

CONTENT PILLARS

What Papi Lotus should post

These pillars keep the content consistent while still giving you enough variety to avoid repetition fatigue.

Pillar	Format	Purpose	Example
Cinematic identity	AI portraits, editorial stills, fake paparazzi	Make the artist look like an established world.	Grainy flash photo outside a motel, caption: 'came back different.'
Song loop	7-12 sec Reels/TikToks/Shorts	Repeat the hook until it becomes familiar.	Same chorus over rainy highway, neon hallway, club bathroom, surveillance footage.
Lyric wound	Text-on-screen + ambient motion	Give people a phrase to attach to.	'you only love me when I disappear' over slow red light flicker.
Video fragments	Official video crops	Milk the expensive asset.	Close-up, walkaway, car shot, performance shot, silhouette.
False reality	AI BTS, backstage, studio, fake magazine	Build mythology without needing a shoot.	'archived footage: lotus sessions 03:17 AM.'
Human proof	Occasional real voice/story	Keep the artist credible and not fully fake.	One candid Story: 'this record sat on my drive too long.'

Rule of thumb: 70% mood, 20% music/video promotion, 10% human proof. The brand should feel mysterious, but not empty.

CLIP FACTORY

Turn one video into 100 posts

The clip factory is the most important operational system. It lets one expensive video become months of content. Start by cutting the official music video into small visual seeds. Each seed should be 3-8 seconds long and contain one clear visual idea. Then use AI tools to recontextualize the clip into different backgrounds, lighting setups, camera feels, or motion styles.

Seed categories: performance close-up, walking shot, hand/neck/jewelry detail, silhouette, car/window shot, red light shot, empty room shot, eye contact shot, object detail, outro moment.

Variation types: rainy city, motel neon, empty club, VHS tape, paparazzi flash, surveillance camera, luxury penthouse, dark church, parking garage, dream fog, red room, chrome hallway.

Output rule: export every strong variation as 9:16 vertical first. Then create square crops only for feed if needed.

Input	AI variation	Final post type
5-sec close-up from music video	Rain on window + red neon + slow camera push	TikTok/Reel with hook lyric
Walking shot	Motel hallway + VHS tracking + flash camera	IG Reel teaser
Silhouette shot	Dark cathedral lights + smoke + chrome blue rim light	YouTube Short
Car/window shot	Late-night highway + wet glass + city blur	Story + Reel
Performance shot	Empty club + single spotlight + analog grain	Release week clip

MINIMAL EDITING WORKFLOW

The easiest possible content machine

- The priority is to reduce friction. Every step should be repeatable, not artistic from scratch each time.
- Use a three-folder system and force everything into the same pipeline. Codex can help build scripts later, but the folder logic should be simple first.
- 01_INPUT: full music video, final song master, cover art, AI character reference images.
 - 02_SEEDS: 3-8 second video seeds cut from the music video.
 - 03_VARIATIONS: AI-generated versions with different backgrounds/styles.
 - 04_POST_READY: final exports named by platform, date, content pillar, and hook.
 - 05_SCHEDULED: assets already loaded into Postiz.

Use templates in CapCut or your simplest editor: one vertical canvas, one lyric text style, one grain overlay, one end card, one link-in-bio CTA. Do not invent a new edit every time.

Naming convention example: **PL_songname_hook01_raincity_reel_2026-06-14.mp4**

Task	Manual version	Automation target
Cut seeds	Pick 10 strong moments by hand.	Codex script uses ffmpeg to cut timestamps from a CSV.
Add song snippet	Drag audio onto each clip.	Codex script overlays the same 12-sec hook onto every video file.
Resize	Export from editor.	Codex script creates 9:16, 1:1, and 16:9 versions.
Captions	Write manually.	Claude generates 50 caption variants from the brand voice.
Schedule	Upload one by one.	Postiz queues assets in batches; use API/automation only after manual process is stable.

WEEKLY CADENCE

A realistic posting schedule

This cadence is designed for consistency without burning you out. Start here and only increase if the system becomes easy.

Channel	Weekly cadence	What to post
TikTok	3-5 posts/week	Hook loops, POV emotional edits, AI video variations, release clips.
Instagram Reels	3-4 posts/week	Best TikToks reposted, official video clips, AI visualizers.
Instagram Feed	2 posts/week	AI editorial portrait, lyric still, cover art, fake magazine visual.
Instagram Stories	5-7 frames/week	Countdowns, polls, screenshots, behind-the-era fragments, pre-save reminders.
YouTube Shorts	2-3 posts/week	Same vertical clips as TikTok/Reels, optimized title/caption.
Website	1 update/week	New visual, embedded video, lyrics page, journal note, release countdown.

The schedule should feel like the artist is everywhere, but the actual workflow should be batch-based. One 2-3 hour batch session should create and schedule most of the week.

30-DAY CONTENT MATRIX

First month of posts

Use this exact matrix for the first month of the comeback era. Replace placeholder dates with your actual target dates.

Day	Post	Caption direction	Asset
1	Identity reset post	'came back different.'	AI portrait, dark red lighting
2	Story poll	'night drive or empty club?'	Two AI backgrounds
3	7-sec hook loop	POV heartbreak line	Video seed + rain variation
4	Lyric still	One toxic-romance lyric	Black background + tiny white type
5	Fake paparazzi post	'3:17 AM / unknown location'	AI flash photo
6	TikTok hook loop	'this part still hurts.'	Same snippet + motel hallway
7	Story countdown tease	No context, date only	Glitch title card
8	Official video fragment	'this sat on my drive too long.'	Real music video crop
9	AI visualizer	'do not text them tonight.'	Slow red room motion
10	Carousel: era images	'lotus season.'	5 AI stills
11	TikTok POV	'POV: you ruined the only good thing.'	Driving/night clip
12	Story link sticker	Pre-save / landing page	Cover art motion
13	Video seed variation	'same memory, different room.'	Empty club AI variation
14	Human proof story	Quick voice/text update	Real phone selfie or studio screenshot
15	Main teaser	Release date and title	Best 12-sec clip

30-DAY CONTENT MATRIX

First month of posts - days 16-30

Continuation of the first-month comeback calendar. Keep the same song snippet and visual language while changing the emotional context.

Day	Post	Caption direction	Asset
16	Lyric clip	Most quotable line	Black/red lyric overlay
17	Fake magazine cover	'Papi Lotus returns from the static.'	AI editorial cover
18	TikTok loop	Ask: 'what does this feel like?'	Hook + surveillance cam
19	Story Q box	'what should I drop next?'	Dark background
20	Video BTS illusion	'archived footage.'	AI backstage/studio
21	Countdown 7 days	Date only	Animated title card
22	Hook loop strongest	'this is the one.'	Best AI variation
23	IG Reel official teaser	Title + date	Official video crop
24	TikTok lyric POV	'when they come back after you healed.'	Night highway
25	Story reminders	Pre-save, video date, audio	3 frames
26	Cover art reveal	Minimal caption	Single cover
27	Final teaser	'tomorrow.'	Best 6-sec clip
28	Release day	Link in bio / video out	Official video + Reel
29	Aftershock clip	'which scene was hardest?'	Alternate crop
30	Thank-you / next signal	'this was only the first transmission.'	AI portrait + analytics screenshot

CAPTION SYSTEM

Hooks, captions, and CTAs

Captions should be short, moody, and easy to repeat. You do not need long paragraphs unless the post is intentionally personal.

Use three caption styles:

- Cryptic: 'you were never supposed to hear this.'
- POV: 'POV: you drove past their exit and still almost turned.'
- Direct release: 'new video out now. link in bio.'

Use CTAs that fit the vibe. Do not beg. Make the audience participate in the mood.

Category	Caption / hook examples
Cryptic	came back different. / do not text them after midnight. / found this in the static. / lotus season begins.
POV	POV: the apology came too late. / POV: you miss the chaos, not the person. / POV: the city knows what happened.
Lyric prompt	which line hurt the most? / save this for the night drive. / send this to nobody.
Release	video out now. / the full transmission is live. / watch before it disappears. / link in bio.
Comment bait without cringe	red room or rainy highway? / should I drop the full version? / which scene feels like the song?

POSTIZ AUTOMATION

How to batch and schedule

Use Postiz as the publishing hub, not the creative brain. Creativity happens in Claude/Higgsfield/CapCut. Postiz becomes the calendar, cross-poster, analytics checkpoint, and consistency tool.

Weekly Postiz workflow:

- Create a weekly folder named by date: PL_WEEK_YYYY-MM-DD.
- Export all post-ready clips and stills into that folder.
- Paste the weekly caption bank into a text document.
- Schedule TikTok first, then cross-adapt to IG Reels and YouTube Shorts.
- Schedule Stories separately because they can be more raw and temporary.
- Every Sunday, review performance and duplicate winners with new backgrounds.

Do not use automation to spam. Use it to stay consistent while keeping quality control.

Postiz board	Use
Drafts	All generated content not reviewed yet.
Ready	Approved assets with final caption and platform choice.
Scheduled	Posts queued for the next 7-14 days.
Winners	Posts with high saves, shares, comments, repeats, or profile visits.
Recycle	Strong concepts that need a new background or caption.

CLAUDE + CODEX ROLES

What each AI should do

Keep the tools in lanes. Claude is the creative strategist and prompt assistant. Codex is the builder and automation assistant. Postiz is the scheduler. Higgsfield is the visual engine.

Tool	Best role	Give it this job
Claude	Creative director	Generate weekly content calendars, captions, prompt variations, title options, brand checks, rollout adjustments.
Codex	Automation engineer	Build file renaming scripts, ffmpeg clip generators, website, landing page, analytics tracker, caption CSV workflow.
Higgsfield	Visual production	Create consistent Papi Lotus character shots, video backgrounds, cinematic variations, image/video outputs.
CapCut or simple editor	Final assembly	Use fixed templates for lyric text, grain overlay, end card, audio sync.
Postiz	Publishing system	Schedule, cross-post, review analytics, repeat winners.

Starter Codex task list:

- Create a local file structure for Papi Lotus assets.
- Write an ffmpeg script that cuts clips from timestamp CSVs.
- Write a script that overlays a chosen song snippet on every clip in a folder.
- Build a simple website with a release landing page, embedded video, lyrics, and mailing list.
- Create a CSV content calendar that can be pasted into Postiz or used as a source of truth.

WEBSITE PLAN

Simple site Codex can build

Do not make a generic musician website. Make a dark landing page that feels like the Papi Lotus world.

Website sections:

- Hero: looping muted visual, artist name, release title, listen/watch buttons.
- Video: embedded official music video.
- Signal feed: latest 3-6 visuals or posts.
- Lyrics: simple lyric page for SEO and fan attachment.
- Email capture: 'join the afterhours list.'
- Links: Spotify, Apple Music, YouTube, TikTok, Instagram.

Style: black background, red glow, chrome text, slow hover effects, no clutter, no corporate bio block.

Page	Purpose	Minimum content
Home	Convert curiosity into clicks.	Hero, latest release, video, links, email capture.
Release page	Make the song feel like an era.	Artwork, audio links, video, lyrics, 3 visual stills.
Archive	Create mythology.	Older visuals, cryptic dates, unreleased-looking assets.
Contact	Professional access.	Booking/collab email, social links, press kit download later.

MEASUREMENT

What to track

Do not judge the release only by likes. You need signs that the world is working and the song is sticking.

Metric	Why it matters	Action
3-second holds / average watch	Shows if the first frame works.	Change opening visual or first caption if weak.
Rewatches / completion	Shows if loop is hypnotic.	Duplicate high-loop posts with new backgrounds.
Saves	Shows emotional attachment.	Make more lyric/POV posts in that tone.
Shares	Shows people see themselves in it.	Turn shared line into more POV content.
Profile visits	Shows curiosity.	Make sure pinned posts and bio convert.
Link clicks	Shows release funnel health.	Move best CTA earlier; improve landing page.
Spotify saves / listeners	Shows music conversion.	Push strongest clip toward streaming CTA.

Weekly rule: every Sunday, pick the top 3 posts. For each winner, create two new versions: one with a different background and one with a different hook/caption.

PROMPT BANK

Ready-to-use creative prompts

These prompts are designed to give Claude and Higgsfield clear direction while keeping the Papi Lotus universe consistent. Replace bracketed text with song-specific details.

Use	Prompt
Claude captions	Generate 40 short captions for Papi Lotus. Tone: dark afterhours R&B,, mysterious, cinematic, emotionally detached, not corny, not influencer. Song theme: [theme]. Use 5 words to 1 sentence each.
Claude weekly calendar	Create a 7-day content schedule for Papi Lotus using one song snippet. Include TikTok, IG Reel, Story, and Feed posts. Prioritize minimal editing and reuse of assets.
Higgsfield portrait	Consistent Papi Lotus character, late-night dark R&B; artist, black layered outfit, silver jewelry, tired eyes, rainy neon motel exterior, grainy flash photography, wine red and chrome lighting, cinematic 35mm, mysterious, premium, not smiling.
Higgsfield video bg	Transform this clip into a moody afterhours scene: rainy city at 3 AM, red neon reflecting on wet pavement, slow handheld camera, analog grain, luxury loneliness, dark romantic energy.
Codex clip script	Build a Python/ffmpeg workflow that reads timestamps from clips.csv, cuts each segment from master_video.mp4, exports vertical 9:16 versions, and names files using song, hook, scene, and date.
Codex website	Build a minimal dark artist website for Papi Lotus with a landing page, release page, video embed, lyrics section, email capture placeholder, and social links. Use black, wine red, chrome, and subtle motion.

LAUNCH DAY

Release week command center

Release week should be pre-scheduled enough that you can react instead of scramble.

Release week checklist:

- Confirm DistroKid links and official audio availability.
- Upload/confirm YouTube music video and thumbnail.
- Update link-in-bio and website hero.
- Pin the strongest Reel/TikTok and official video post.
- Post Stories: video out, song link, question sticker, best lyric.
- Comment from your artist account on early engagement in the same brand voice.
- DM close supporters with a simple ask: watch, save, share the clip that hits hardest.
- After 24 hours, duplicate the best-performing clip with a new first frame and caption.

Final operating mantra:

One song. One world. Many signals. Do not make people decide from one post. Make the era unavoidable.

SOURCES

Tool notes used for this plan

These are not creative rules; they are reference notes for the tools mentioned in the strategy.

Source	What it supports	URL
DistroKid distribution	DistroKid says it distributes to Spotify, Apple Music, TikTok and 150+ platforms; its support page gives general store availability time ranges.	https://distrokid.com/ and https://support.distrokid.com/hc/en-us/articles/360013649293-How-Long-Does-It-Take-for-My-Music-to-Be-Available-in-Streaming-Services
